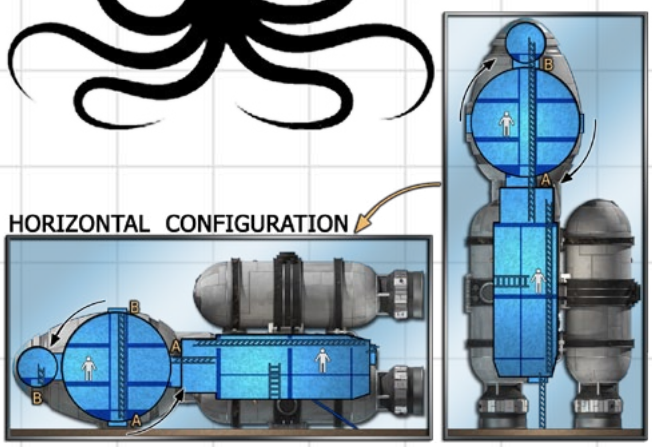
This material may not be distributed without permission of the author.



The purpose of this document is to show you what you can expect should you choose to invest in this issue of the 0-hr Armada Codex. This issue presents three smaller ships: the Nightingale medical transport, Kalmar-class light tanker, and K62 recreational shuttle. Though from the same guild of shipwrights, each is very different in form and function.

The product consists of a main book, map pages book, and uncut map images. Specifically, this is what is shown in this brief demo document:

- **Page 2 (background): Main Book.** An overview of the ships, components, and statistics is provided. The stats are generic descriptions and not from any particular game system. Each area of each vessel is enumerated and described. Rendered images are included throughout.
- **Page 2 (lower left): Map Book.** The map book provides tactical maps (1 inch = 5 ft.) for the interior areas of the ships. The pages are designed to be printed out and laid edge to edge. Layers are used so that certain map elements (like the grid, cargo, or the black and white version of the map) may be toggled on and off as desired.
- **Page 2 (right): Uncut Maps.** Complete deckplans are presented in a single giant image, layered so that the grid, black and white version, and so on can be toggled on or off. It includes a light background good for printing, and a dark background good for display on a computer or with a projector. Single layer jpeg images are also included for easy VTT use.
- **Page 3:** This is a sample page from the map book. The layers are live in this demo document.
- **Page 4:** Displayed here is a sample of some rendered art from the main book.
- **Page 5:** This is a copy of the product overview from the sales web page.

Thank you for taking the time to explore this product line. I hope that these ships can find a place in your fleet!

Nightingale Trio

This issue of the Codex presents another trio of small ships that vary greatly in both style and intended use. All are utility vehicles to add life to your campaign or to provide a ready-made ride for your heroes, villains, or working-class supporting cast trying to get by.

The **Nightingale** medical transport is a first responder for heavy casualty events - whether it be a civilian disaster or a military engagement. The ship has two surgery bays plus sixteen medical cryo-chambers to hold casualties for future treatment. She carries a pair of ambulance shuttles and has bunks for up to eight crew. There's also a military "Nighthawk" medivac version and a covert, well-armed "Nightshade" version for use as a prisoner transport.

With a crew of 2 to 4, the **Kalmar**-class tanker is designed to haul fuel, water, and other liquids. The main decks can rotate for horizontal flight or tail landings. It is unarmed but has a pair of aft-mounted micro minelayers and the ability to jet away in "turbo" mode (thus the name, which derives from "Кальмар", the Russian word for squid).

The **K62** is a larger version of K6 medical shuttle carried by the Nightingale. It's registered as a "recreational vehicle" meant for families on vacation or extended trips, but the half dozen bunks and extended range also make it useful for exploration, courier duties, or as a simple home away from home.

The Nightingale Trio package contains three highly detailed, layered PDF files:

- Main Book
  - 29 page PDF file detailing the interior areas of the ships.
  - Contains 3D rendered scenes as well as orthographic views.
  - Includes system independent statistics designed for easy adaptation to your game of choice.
  - Background, art, and text are on different layers for custom display and printing.

- Map Pages
  - 20 page PDF file containing complete interior maps and instructions for assembly.
  - Miniature-scale maps for tactical combat with an optional 1 inch = 5 ft grid.
  - Divided into pages for easy printing in full color or printer-friendly black and white.
  - Selectable layers include: grid, black & white version, and optional cargo.

- Uncut Map Images
  - Three PDF files containing uncut images of the deckplans for the ships.
  - Includes a 21x25 inch Nightingale, 16x23 Kalmar, and 13x11 inch K62 shuttle, map image.
  - Select either a light or dark background (for printing or projection/display).
  - Includes layers for grid, black & white version, optional cargo, and background choice.
  - Flat jpeg images, grid-aligned, on a dark background are also provided for use on screen.

Sample document and art, as well as poster maps and matching miniatures, are available at **0-hr.com**.

Thank you for taking the time to consider the Nightingale, Kalmar, and K62-class starships. Like my previous small-craft offerings, I hope that these three little ships can be a big addition to your game!
